

How To Measure For Roof Pitch Requirements

Measure Downward From The Center Of The Roof To The Base Line Of The Roof

The Base Line Of The Roof Is Established By The Line Created By Measuring Across The Home From Side To Side At The Edge Of The Roofing Material.

To Be An Approved Roof Pitch, The Measurement Between The Center Of The Roof (Roof Peak) And The Base Line Must Be A Minimum Of 24 Inches.

Pitched Roof Is A Roof For A Manufactured Home, Whether A-Shaped Or Rounded, Which Has A Minimum Rise Of 12 Inches For Every Seven (7) Feet Of Width.

EXAMPLE: A Singlewide Home With A Base Line Of 14 Feet Requires A 24 Inch Vertical Rise.
